To Whom It May Concern:

I have no hesitancy whatsoever in recommending that you consider working with Itasca Construction. I have had the pleasure of working with them on several projects for Florida Orthopaedic Institute.

We began working with Itasca on a small build-out project for a Bone Densitometry room. We were so pleased with their efficiency and the quality of their work that we asked them to bid on a project refurbishing an old medical office building in South Tampa. They made every effort to give us quality materials and work while staying within a given budget. The project began and ended in the time frame quoted. At the end of the project, they completed every detail listed on the final "punch list". We have since worked with Itasca on another project installing a Digital X-ray system and will be working with them on two other projects in the future.

Vaughn Jones has been my contact throughout each of the projects with Itasca. Vaughn is friendly, reliable and diligent in finding exactly what is needed to complete a job efficiently and with high quality. I have the highest respect for Vaughn and the services that Itasca Construction has provided.

Sincerely,

Patricia Salvo
Director of Clinic Services
